

Benefits of CICD

Why CI/CD Means:

- Continuous Integration and Continuous Deployment are two integral components of Continuous Delivery.
- Continuous Delivery is necessary for delivering value and customer satisfaction.
- CI/CD along with agile methodology makes it possible to make quick and efficient releases.
- It is not only a technique but a mindset which enhances the current development and deployment cycle.

Benefits of CI

- Continuous Integration is process of making.
- It helps to:

Reduce
Cost by

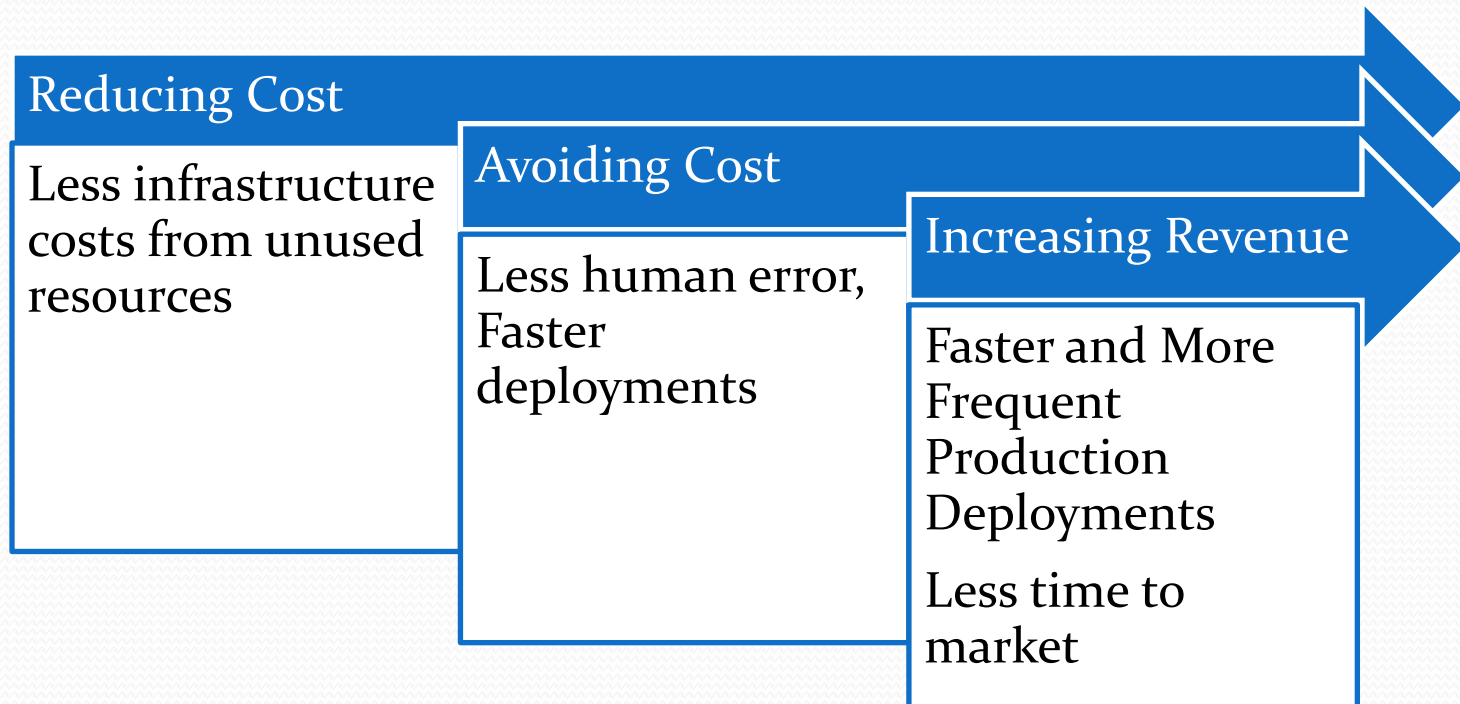

- Catch errors quickly
- Developers spend more time developing the code rather than solving the bugs

Avoid
Cost by

- Less bugs in production
- Prevent embarrassing or costly security holes

Benefits of CD

- Continuous Deployment is a process of moving.
- It helps in:

Final Call!

- Adopting Devops is not only beneficial for developers but for business as quick releases ensure that the time to market will reduce significantly.
- We will be able to innovate and deliver quickly and efficiently.
- Revenue and Profit will outweigh the cost of implementation in long term.
